

Report for creating the UI components for Welcome and Sign Up pages for Ekracker application

Objectives:

- To create the UI components for the Welcome and Sign Up pages.
- Create navigation effects between pages
- Ensure proper responsiveness for different device views.

Procedure:

- Cloning the default project from the remote repo
- Installation of git on my local device
- Writing the code and testing its output and ensuring it meets product back look.
- The code was pushed to the git repo

Analysis:

The task was completed with 85% success level, involving creating the UI template, styling and ensuring responsiveness.

Navigation between the pages was not implemented.

Problems faced:

Integration of git technology

Conclusion:

In summary, the development of the UI components for the Welcome and Sign Up pages of the Ekracker application progressed significantly within the sprint timeline. The key objectives of creating visually appealing and responsive UI components were largely achieved, with an overall success rate of 85%. The templates and styles created effectively meet the design specifications, providing a solid foundation for user interaction.

However, the implementation of navigation between the pages remains outstanding, which is a crucial element for enhancing user experience. Additionally, the integration of Git technology presented some challenges that have been addressed to streamline future collaboration efforts.

Moving forward, it is recommended to prioritize the navigation implementation and further familiarize the team with Git to mitigate integration issues. Overall, the project is on the right track, and with these adjustments, we can achieve a fully functional and user-friendly application.
