

## Unity Project report format

This document presents how all task reports should be formatted so we can easily review the documentation in future and make good use of it.

The first thing you should have in mind is as soon as you submit your project you are to submit your report immediately. This will help the person merging the work to understand what he's doing perfectly and avoid getting to you all the time.

This means that your report should be clear and concise.

This is the procedure you should follow in reporting.

- ✚ Task name ✚ date started and completed

- ✚ Task description (how you completed the task)

- ✚ Libraries installed

- ✚ Method of running project

- ✚ Problems faced

- ✚ A detailed explanation of how these problems were solved (very important so that if this problem arises in future one can refer to your documentation)
